## **PORTS AMERICA, MSGP STORM WATER POLLUTION PREVENTION PLAN Houston, Texas**

SNM2R provided environmental regulatory compliance services to the Ports America Gear Room facility. This task included the preparation of a written Stormwater Pollution Prevention Plan (SW3P).

SNM2R prepared the SW3P in accordance with the Texas Commission on Environmental Quality's Texas Pollutant Discharge Elimination System (TPDES) TXR 050000 Multi-Sector Industrial General Permit. SNM2R included the following:

- Identification of actual and potential sources of pollution that may reasonably be expected to affect the quality of storm water discharging from the facility;
- Establishment of practices and any necessary control measures that will prevent or effectively reduce pollution in storm water discharges from the Ports America;
- Description of how controls and practices interrelate to comprise an integrated, facility wide approach for storm water pollution prevention;
- Establishment of a Storm Water Pollution Prevention Team and identification of team members who will be responsible for developing and revising the SW3P;
- Facility description that included information about activities, materials, and physical features of the facility that may contribute pollutants to storm water and any pollutant discharges that could occur during dry weather; and

SNM2R also trained Ports America on the documentation for the monitoring and inspection procedures and schedules that will be implemented at the site.
